Fixed Mobile Convergence

Cellular

Internet,
Public WiFi

Enterprise WiFi

How popular would you be...

*...if you could **reduce the cost and complexity** of your company communications and **increase productivity, control and security**?*

The DiVitas solution enables the entire workforce to be equipped with a single mobile communications device that switches seamlessly between WLAN, cellular and public WiFi networks enabling them to roam freely and remain in constant contact.

This brings many advantages to the organisation and individual:

Reduces cost and complexity

- one mobile device for all calls - for all staff
- PBX feature extension over mobile handsets
- no need to supply desktop phones
- single voice mailbox
- least cost routing (WLAN, cellular and public WiFi networks)

Increases productivity

- all staff always in contact
- no dead spots
- no dropped calls – seamless switching between networks
- mobile access to key applications (email, IM etc.)

Increases control

- open standards-based product architecture
- choice of WLAN and PBX vendor
- choice of mobile carrier and smart mobile devices
- total management control of policy and compliance
- extended security for remote access

The DiVitas mobile-to-mobile convergence (MMC) solution grants end users continuous accessibility by relying on a single device for placing and receiving all calls (MMC is the seamless convergence of WiFi and cellular networks). DiVitas enables seamless roaming (back and forth) between WiFi and cellular networks, resulting in increased response time, and thus productivity, among mobile workers.

The DiVitas MMC solution additionally provides mobile workers with single-device access to desktop applications such as Instant Messaging (IM) and PBX desk phone functions (corporate voice-mail, 4-digit dialing and call forwarding). Relying less on cellular, and more on WiFi, reduces carrier costs for enterprises. Moreover, the DiVitas MMC solution is priced comparably with a standard desktop phone system.

DiVitas User Benefits

- Single device for multiple applications
- Secure Instant Messaging (IM)
- Single voice-mail • Seamless network experience (agnostic mobile-network access)
- PBX feature extension over mobile handsets
- Presence-based user interface

DiVitas Enterprise Benefits

CONTINUITY

- Call handoff without dropping
- Integration into enterprise communication systems (i.e. PBX)
- Access applications such as messaging and PBX desk phone functions over any network (WiFi/cellular/landline) via a single device

CONTROL

- Enterprise IT control and management over mobile devices
- Broad choice of wireless carrier, mobile devices and WLAN vendor support
- Extended security for remote access
- Open standards-based product architecture
- Improved associated productivity and responsiveness
- Least Cost Routing

COST

- Reduced mobility costs (up to 10x less expensive than cellular)

Mobility Outside the Office

Enterprises today are realizing productivity gains from mobilizing the workforce. As a result, they have begun to equip certain employees with mobile devices such as cell phones, smart phones, laptops and pagers.

These road warriors spend a major portion of their work hours off-site. Senior executives, sales people and IT support staff are some examples of typical road warriors whose jobs depend on real-time communication. Mobilizing these workers will help organizations realize the benefits of increased staff efficiency, productivity and customer satisfaction.

Mobility Within the Office

Road warriors are not the only workers to benefit from DiVitas. DiVitas aims to extend the flexibility, convenience and responsiveness of mobile communications to the rest of the workforce. This is especially important for workers who frequently perform functions away from their desk, but still need to be available by phone. These job roles can include office assistants supporting multiple executives, engineers meeting in a conference room and other workers who roam the halls and spontaneously collaborate with co-workers (so-called corridor warriors).
