

**In today's world, realising a vision for tomorrow requires mobility. More specifically, the more secure, more manageable, more scalable, more powerful true mobility networks of Aruba**

**What's your vision?** To lead your industry? To make your employees mobile, your business responsive and enable competitive advantage? For today's enterprise, realising a vision for tomorrow requires mobility. And it must be more than just an extension of the wired network. Security, reliability, seamless experience must all be delivered without completely overhauling what exists, what works. You have the vision. Aruba has the mobile network to get you there, wherever you need to go.

**What's your vision?** To help your hospital become a true center of excellence? To enable your doctors and nurses with the very best technology, extending the effectiveness and efficiency right to the point of care? The creation of a truly ubiquitous wireless network that securely serves every care provider, administrator and patient, everywhere, on any device. Deliver seamless access to patient record databases, streaming of real-time scans and picture imaging without trailing cables. You have the vision. Aruba has the mobile network to help you deliver the care.

**What's your vision?** To turn your campus from a university to a universe of learning and opportunity? To give your students and faculty the easiest, most seamless access to the resources and services they need? Deliver cost-effective connectivity to a multitude of students, securely, manageably. You have the vision. Aruba has the mobile network to help you deliver learning.

**What's your vision?** To create the ultimate customer experience? To protect and secure PoS and cardholder data? To improve visibility into all aspects of your operations? To deliver mobility to your remote sites, you don't want complex technology at the edge; you want simple to deploy, easy to support solutions that deliver secure encrypted data all the way back to the data center. You have the vision. Aruba has the mobile network to help you mobilise your retail teams.

**What's your vision?** To keep the public sector running and allow seamless access to your networks wherever they are? To deliver solutions which provide mobility and increase efficiency? Wireless networks don't have to mean upgrading your existing infrastructure to maintain security and connectivity. You have the vision. Aruba has the mobile network to help you build a secure infrastructure.

**What's your vision?** To provide the most innovative financial products and services available? To mobilise knowledge workers, increasing collaboration but ensure the network is impervious to attack? Whether you plan to stop wireless access, or want to deploy to every office, the most effective solution is to deploy a user-centric secure mobile infrastructure. You have the vision. Aruba has the mobile network to help you guarantee the confidentiality of your information

## The Aruba Difference

At Aruba Networks our vision is to help you build a user-centric secure mobility infrastructure; a solution that enables secure access to applications across wireless and wired enterprise networks.

We understand the main concerns organisations have over deploying wireless access into their network relate to security and reliability. That's why we designed our products to allow end-users to seamlessly roam between different locations within a campus or office building while maintaining secure and consistent access to all of their network resources. Using the Aruba Mobile Edge Architecture, IT departments can establish and enforce policies that control network access and prioritise application delivery based on an end-user's organisational role and authorization level. IT departments can also cost-effectively scale the same user-centric access model to remote locations, such as branch offices and home offices, to create a seamless mobility overlay spanning the extended enterprise network.

## TECHNOLOGY SOLUTIONS

### BUILT IN SECURITY

We integrate per user firewalls, wireless intrusion prevention, and encryption of all traffic back to the core.

### SINGLE SSID

We enable mobility with a user-centric architecture that defines a single mobility domain with one SSID across the entire network. You don't need to rebuild your VLAN/Layer 3 network to accommodate wireless.

### REMOTE OFFICE 1 HOME OFFICE

We ensure end user policies are mobile, applying a common experience regardless of where a user roams - in the central office, in regional or branch offices, at home, and on the road.

### EMBRACE MOBILITY, SECURITY, AND CONVERGENCE:

Deploy a purpose built infrastructure that has all the features necessary to deliver Fixed Mobile Convergence meet existing and future requirements avoiding wholesale upgrades of the existing infrastructure.
